

$$\begin{aligned}\text{Development time} &= 1 \times (\text{Effort})^{0.35} \\ &= 1 \times (16.41)^{0.35} \\ &= 2.6 \text{ months}\end{aligned}$$

Cost calculation:

Average development cost = 200 Tk/hour

Working hour per month = 160 hours

Cost per developer = 32,000

$$\begin{aligned}\text{Total cost} &= \text{Effort} \times \text{monthly cost} \\ &= 16.41 \times 32,000 \\ &= 5,25,120\end{aligned}$$
